**DETAILED ACTION**

***Election/Restrictions***

1. Claims 36-38, 41-62 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 4/19/05.
2. Applicant's election of species 1 in the reply filed on 4/19/05 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 31-34 and 40 are rejected under 35 U.S.C. 102(b) as being anticipated by Gustafsson et al (US 5,671,085 from IDS).

Gustafsson et al discloses a microscope comprising: at least one light source (Fig. 4, 30); at least one detector (22);

Art Unit: 2872

two objectives (12, 14), one of the objectives being arranged on each of the two sides of the specimen plane and the objectives being directed toward one another and having a common focus (see 12, 14, 16); at least one beam splitter and a beam recombiner (20); a modular assembly (inherent holder that holds the elements set forth above) for grouping the objectives and the beam splitter/beam recombiner therein (by inherent housing); and interface is provided with the modular assembly for connection to the illumination/detection beam path of the microscope (inherent housing that holds 12, 14 and 20 has an optical interface between the light entering the beam splitter and also light exiting the beam recombiner, i.e. the beams travel between these assemblies). The modular assembly is connected with its interface instead of a conventional objective (by optical interface). There is a baseplate (plane of the page) and the optical components are arranged in a housing (inherent otherwise the con-focal scanning beams can be bent within the housing). The modular assembly comprises a specimen stage (16) that is arranged between the objectives (see Fig. 4).

***Claim Rejections - 35 USC § 103***

Art Unit: 2872

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this

Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claim 35 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gustafsson et al.

Gustafsson et al discloses the claimed invention as set forth above except for the housing that is hermetically sealed. It would have been obvious to one of ordinary skill in the art to make the housing to be hermetically sealed for the purpose of preventing dusts deposited onto the optical components disposed in the housing.

#### ***Allowable Subject Matter***

7. Claim 39 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The following is a statement of reasons for the indication of allowable subject matter: claim is allowable at least for

Art Unit: 2872

the reason that the prior art does not teach or reasonably suggest the modular assembly that is arranged on the baseplate in such a way that temperature-related expansions compensate for one another and therefore have no effect on the optical alignment state of the modular assembly as set forth in the claimed combination.
